

Vitaly Porokhnya

Moscow

Citizenship: Russia

Work authorization: Russia, China

Email: rikkimortycrypt@gmail.com

Telegram: @vitaly_kur

AI Engineer

Specializations: AI Engineer, Data / ML Engineer, Python Developer

Employment: part-time, contract, project-based

Work format: remote

Professional Summary

AI / Data Engineer with 20+ years in IT and 4+ years in data/ML engineering and AI-driven product development. Design and deliver end-to-end solutions: from data ingestion and processing to production APIs, integrations, and product-facing AI capabilities. Strong hands-on stack includes Python, SQL, Spark, FastAPI, Airflow, DBT, AWS, GCP, and AI tooling for rapid development, prototyping, and research.

Key strengths include product thinking, independence, ownership, operating in ambiguity, and designing architectures and integrations. Have practical experience building data and ML pipelines, ML infrastructure, APIs for model-based services, and coordinating cross-functional delivery.

Core Skills

- Python, SQL, FastAPI, Flask, REST API, GraphQL
 - PySpark, Spark, Airflow, DBT, Airbyte
 - AWS, GCP, BigQuery, S3, Lambda, Data Lake
 - PostgreSQL, MS SQL, MongoDB, Redis, Neo4j
 - Data engineering, ML infrastructure, feature pipelines, production AI services
 - AI-driven development, LLM, AI agents, copilot tools, rapid prototyping
 - Service and integration architecture, product engineering, ownership delivery
-

Professional Experience

AI Engineer / Product Engineer - SinopticsAI

2025 - 2026 - remote

- Owned the full lifecycle of product features: from idea and prototype to production rollout and further iteration.
- Built end-to-end solutions with AI as a core working instrument, using LLMs, AI agents, copilots, and automation to accelerate development, research, and technical decision-making.
- Organized an AI-driven development process: decomposed tasks, validated hypotheses quickly,

assembled prototypes, and converted them into stable product solutions.

- Designed service architectures and integrations, including APIs, external tools, and MCP connections that expanded product capabilities.
- Made product and technical decisions independently in uncertain environments while keeping ownership of outcomes, timelines, and quality.
- Launched new capabilities with a strong focus on business value, usability, and speed to market.
- Involved adjacent specialists when needed and coordinated work across design, analytics, QA, and other team functions.

Data / ML Engineer - Yofi

December 2021 - October 2025 - China - yofi.ai

- Designed and built large-scale data and machine learning systems, from raw data ingestion to production support for models.
- Built big data processing pipelines from scratch with PySpark, transforming raw inputs into ready-to-use ML features.
- Set up Airflow and optimized pipelines, improving process stability and reducing execution time by around 25%.
- Automated data refresh workflows with Airbyte and DBT, decreasing manual work for the data science team.
- Launched and supported ML-related services in AWS and GCP, including Lambda, S3, BigQuery, Data Lake, and related cloud components.
- Implemented serverless approaches for ML services, improving reliability while reducing operating cost.
- Integrated data from Shopify, Klaviyo, and other external sources into a unified analytics warehouse.
- Selected and introduced databases for different workloads, including PostgreSQL, MongoDB, Neo4j, and Redis.
- Developed Python APIs with FastAPI and Flask for model usage and internal services.
- Introduced pipeline testing and data quality practices, reducing incidents caused by problematic data.
- Performed code review and advised teams on data, ML infrastructure, and engineering practices.

Team Lead - Engineering Solutions LLC

February 2013 - January 2017 ? Moscow

- Supported day-to-day operations and coordinated team work.
- Participated in automation of internal processes and management reporting.

Deputy IT Director - Monolit

January 2003 - February 2013 ? Moscow

- Developed and supported a corporate ERP system.
- Worked with MS SQL and PostgreSQL.
- Automated management, financial, and accounting reporting.

Software Engineer - Gradient

June 1999 - July 2001

- Developed software for electronic and electrical engineering devices in C++.

Education

- 2007 - Russian Presidential Academy of National Economy and Public Administration, MBA, CIO

- 2003 - Rostov State University, postgraduate studies, Candidate of Physical and Mathematical Sciences
 - 1999 - Rostov State University, Physics, Radiophysics
-

Courses and Professional Development

- 2022 - CPA, financial and management reporting
-

Languages

- Russian - native
 - English - B2
 - Chinese - B1
-

Additional Information

- Driving license category B
- Personal traits: strong work ethic, systems thinking, result orientation
