

# Vitaly Porokhnya

Senior Business Analyst (fintech / data / finance)

Remote format: fully remote, any time zone (8+ years of remote work)

Languages: Russian - native; English - fluent; Chinese - HSK 4

## Professional Summary

Business and finance analyst with 20+ years of experience across IT, finance, and data-intensive environments. Combine business analysis and financial expertise with hands-on work in data: from requirements gathering and executive reporting to data marts, SQL, and pipelines. Recent focus includes fintech and AI: financial metrics analytics, integrations (payments, e-commerce), invoice processing, document verification, OCR workflows, and operational automation. Strong fit for roles that need both P&L / IFRS understanding and practical SQL, Python, BI, and stakeholder communication skills.

Compensation expectations: negotiable; reference range from \$3,000 to \$5,000 per month (USDC) depending on scope and cooperation model.

## Core Competencies

| Area                   | Tools and experience                                                                                                                                                                    |
|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SQL / data             | PostgreSQL, MS SQL, BigQuery, Spanner; DBT. Window functions, CTEs, query optimization on large-scale datasets (millions of rows). DWH design and advanced analytical querying.         |
| Financial analysis     | P&L, budgeting, plan-vs-actual, cash flow; IFRS, consolidated reporting. CAP qualification; advanced training in financial and management accounting (CPA Russia).                      |
| Python / orchestration | Pandas, NumPy, PySpark; Airflow (DAGs), ETL/ELT automation; FastAPI. Around 4 years of production experience in data processing and analytics.                                          |
| Cloud and integrations | AWS, GCP; Lambda / Cloud Functions, S3/Object Storage, API Gateway, queues; integration experience in fintech environments, including Shopify and Klaviyo.                              |
| BI and reporting       | Automation of management, financial, and accounting reporting; dashboards; SQL-driven reporting systems; DBT-based transformations.                                                     |
| Domain expertise       | Fintech / AI (Yofi - USA), invoice processing and document verification (SinopticsAI - OCR, workflow, risk scoring). Familiar with crypto workflows, including USDC-based compensation. |

## Professional Experience

### Team Lead - SinopticsAI

September 2025 - March 2026 - [github.com/SinopticsAI](https://github.com/SinopticsAI)

- Led a cross-functional team building a product for automated processing and verification of foreign trade

and finance-related documents, including invoices, waybills, and adjacent scenarios.

- Acted as the bridge between product, business, and engineering: gathered and structured requirements, aligned workflows, and formalized validation rules and acceptance criteria.
  - Built transparent delivery and reporting processes for stakeholders, including document statuses, verification checkpoints, and risk visibility.
  - Coordinated product workstreams, including client-facing interfaces and service-side logic, while supporting pilots without overloading customers with implementation details.
- 

## **Business Analyst / Data Engineer - Yofi (USA, fintech / AI)**

*February 2022 - September 2025*

- Designed DWH and ETL/ELT solutions with a strong focus on data quality using DBT, PostgreSQL, GraphQL, MS SQL, MongoDB, DynamoDB, Redis, Neo4j, SQL, Python, and JavaScript.
  - Developed a project-level ROI calculation system with detailed decomposition by initiative.
  - Built dashboards and analytics reporting for decision-makers.
  - Used AWS and GCP services such as Lambda, API Gateway, S3, Secret Manager, SQS, and SNS for scalable data processing.
  - Worked with Spark, Airbyte, Airflow, and PySpark in DAG-based pipelines, supporting real-time integrations, analytics delivery, and AI use cases.
  - Automated API documentation and consulted internal teams on practical data usage.
- 

## **Business Analyst, Finance and Logistics**

*December 2017 - February 2022*

- Developed internal management and financial reporting templates.
  - Helped design a supply chain management system.
  - Worked on budgeting, spending limits, quarterly and annual plan-vs-actual analysis, and cash-flow scenarios.
  - Participated in annual and quarterly unconsolidated and consolidated IFRS / CAS reporting, including cooperation with auditors and reporting mapping.
  - Supported capitalization initiatives, feasibility studies, and audits of charter capital and subsidiaries.
  - Managed banking relationships and controlled payments and internal finance procedures.
- 

## **Business Analyst, Finance and Investments - Engineering Solutions LLC**

*March 2013 - December 2017*

- Worked with ERP, reporting, and MS SQL; automated financial and management reporting and supported decision-making with data.
  - Combined IT and finance responsibilities across investment analysis, budgeting, business models, procurement policies, and finance controls.
  - Designed KPI systems.
  - Contributed to warehouse management system development.
- 

## **Education and Certifications**

- MBA, RANEPA (2005-2007), specialization: information technology in management.
- Candidate of Physical and Mathematical Sciences, SFedU postgraduate studies (2000-2003).
- Physics degree, Southern Federal University (1994-1999).
- CAP (Certified Accountant Practitioner); CPA Russia courses in IFRS, management accounting,

taxation, and Russian law; chief accountant training.

---

## **Additional Information**

- Open to discussing cases around DWH / DBT, financial dashboards and reporting processes, Shopify / Klaviyo integrations, and invoice / OCR pipelines.
