

# Vitaly Kurnosenko

Data Analyst (Marketing / Growth) | SQL · data marts & reporting · data quality · dashboards

Remote | Telegram: @vitaly\_kur | Email: rikkimortycrypt@gmail.com

Citizenship: Russia

Languages: Russian — native; English — B2+

## Target role

- Data Analyst (Marketing) for a high-scale audience and a complex funnel (Wallet in Telegram or comparable B2C products)
- Focus: segmentation, campaign-ready data, dashboards & recurring reporting, data quality, experiments, and communication effectiveness
- Full-time, remote

## Profile

Data analyst with a strong engineering backbone: SQL, Python, DWH/ETL, large volumes, and analytics marts. I translate marketing and product questions into testable metrics, recurring reports, and clear insights for stakeholders.

Fintech and AI product experience includes ROI for initiatives, analytical dashboards, and enabling teams to use data — transferable to campaign performance, retention, and user value. Earlier product analyst work: market & segment analysis, launching directions, and commercial hypotheses.

ClickHouse: no production experience yet; solid SQL plus OLAP-style marts / large tables (PostgreSQL, MS SQL, Spark/PySpark, orchestration) provide a fast path into ClickHouse.

## Fit for Wallet (role mapping)

| Requirement                                  | Experience                                                                                                                                                                                        |
|----------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2+ years marketing / product / data analysis | Yofi (Feb 2022 — Mar 2025): data, marts, reporting, ROI; Sinoptics (from Mar 2025): product logic and data quality in user journeys; earlier — product analyst (segments, market, unit economics) |
| SQL, ClickHouse, large datasets              | SQL for complex queries and pipelines; Spark/PySpark, Airflow, DBT, multiple databases/sources; ClickHouse — deliberate upskill on top of SQL                                                     |
| BI: Tableau, Power BI, Looker, Superset      | Power BI (recurring analytics); happy to work in Looker / Superset / Tableau as the team prefers                                                                                                  |
| Campaigns, funnels, retention, LTV           | I do not position direct messenger marketing campaign ownership; strong base: funnels & conversion in product logic, retention & value via financial/product KPIs, data quality metrics can trust |
| Dashboards, automated reporting              | Dashboards, automated calculations & marts (DBT, orchestration), recurring stakeholder reporting                                                                                                  |
| Attribution & marketing measurement          | Conceptually and via cost vs. impact (initiative ROI); ready to go deeper on attribution & incrementality with the team                                                                           |

|             |                                                                                                                               |
|-------------|-------------------------------------------------------------------------------------------------------------------------------|
| A/B testing | Experiment design and statistical caution at product analyst level; ready to strengthen formal marketing A/B practice in role |
| Python      | Python for analytics and pipelines (PySpark, data scripting)                                                                  |

## Core skills

| Area               | Details                                                                        |
|--------------------|--------------------------------------------------------------------------------|
| Data & SQL         | SQL, Python, PostgreSQL, MS SQL, MongoDB, DynamoDB, Redis, Neo4j, GraphQL      |
| Scale & pipelines  | DBT, Airflow, Spark / PySpark, Airbyte; mart quality & consistency             |
| Visualization & BI | Power BI, Jupyter; Looker / Superset / Tableau as needed                       |
| Product & business | Reporting requirements, data quality criteria, marketing/product collaboration |
| Communication      | Jira, Confluence; clear narratives for non-technical audiences                 |

## Experience

### Business Analyst — Sinoptics (AI / compliance)

*Mar 2025 — present*

- User journeys and validation rules: impact on data quality and correct statuses in reporting.
- Requirements through UAT: alignment with engineering, edge cases, reproducible logic for analytics.
- Data flows (Python, SQL) for analytics and product AI features.

### Business Analyst / Data Engineer — Yofi (fintech / AI, USA)

*Feb 2022 — Mar 2025*

- DWH, ETL/ELT, marts (DBT, PostgreSQL, MS SQL, MongoDB, DynamoDB, Redis, Neo4j, GraphQL); orchestration (Airflow), scale (Spark, PySpark, Airbyte).
- ROI model for projects and dashboards for analytics; linking initiatives to measurable impact.
- SQL, Python, JavaScript; API-related automation; supporting analysts and operations on data use.

### Data Analyst (logistics / foreign trade) — Forms LLC

*Jan 2017 — Mar 2022*

- Large datasets, comparative analysis, reports and recommendations (SQL, Python, Power BI, etc.).

### Product Analyst — New Technologies LLC

*Jan 2010 — Feb 2013*

- Market & segment analysis, competitive landscape, business plans, product line launches, assortment and direction economics.

### Corporate finance (until 2022, multiple jurisdictions)

- 15+ years in finance: plan vs. actual, budgets, reporting, controls — discipline around metrics, number

consistency, and stakeholders (details on request).

---

## **Education & credentials**

- MBA, RANEPA, CIO track, 2007
  - PhD candidate (physics & mathematics), Southern Federal University, 2003
  - Specialist, radiophysics, Southern Federal University, 1999
  - CAP (Certified Accountant Practitioner); CPA course work: IFRS, management accounting
- 

## **Additional**

- Driving license category B
- Interest in Telegram / TON / crypto products as a user and as a data analyst for high-scale audiences
- Strengths: analytical thinking, data quality focus, cross-functional communication, English for docs and calls
