

Vitaly Porokhnya

Data Engineer | AI-Enabled Data Platforms | ETL/ELT | Cloud & Analytics Engineering

Place of Residence: Bangkok, Thailand | **Phone / Skype:** +86 15601694273 | **Email:** rikkimortycrypt@gmail.com
| **WeChat:** porohnya | **Telegram:** @vitaly_kur | **Languages:** English - fluent spoken and written; Chinese - HSK 4;
Russian - native

Professional Summary

Data Engineer with extensive experience designing and operating scalable data platforms, ETL/ELT pipelines, and analytics infrastructure. Proven track record of transforming complex data landscapes into reliable, high-quality assets that power analytics, machine learning, and business-critical applications.

Expert in building data warehouses, real-time and batch processing systems, and cloud-native data solutions. Skilled at integrating diverse data sources, enforcing data quality, and enabling downstream teams with clean, documented, and performant datasets.

Hands-on with the modern data stack: Python, SQL, Airflow, DBT, Spark, Airbyte, PostgreSQL, MongoDB, Neo4j, AWS, GCP, and serverless architectures. Strong focus on production reliability, observability, and leveraging AI/LLM tooling to accelerate development and insight generation.

Core Skills

Area	Tools and experience
Data platforms	Data warehouse architecture, dimensional modeling, ETL/ELT design, data quality frameworks, analytics engineering
Programming & APIs	Python, SQL, JavaScript, REST/GraphQL API development and integration
Orchestration & Big Data	Airflow, DBT, Spark, PySpark, Airbyte, incremental processing, CDC patterns
Databases & Storage	PostgreSQL, MSSQL, MongoDB, DynamoDB, Redis, Neo4j, S3, data lake design
Cloud & Infrastructure	AWS (Lambda, API Gateway, S3, SQS, SNS, Secrets Manager), GCP, serverless, CI/CD for data
AI & Advanced Analytics	ML feature pipelines, real-time scoring integration, LLM context engineering, generative AI workflows
Practices	DataOps, DevOps, CI/CD, cross-team enablement, documentation automation

Professional Experience

Data Engineer / AI Product Engineer - Sinoptics AI

March 2025 - Present

- Architect and maintain Python/SQL data pipelines that convert raw, semi-structured, and third-party API data into curated, analytics-ready datasets.
- Establish data contracts, validation layers, and lineage tracking to ensure consistency across product experimentation and AI feature development.

- Collaborate with product and ML teams to productionize prototypes, applying rigorous engineering practices around testing, monitoring, and rollback.
- Leverage modern LLM tooling and agentic workflows to accelerate data exploration, documentation, and pipeline generation while maintaining human oversight and quality gates.

Data Engineer - Yofi (USA company)

February 2022 - January 2026

- Designed and implemented end-to-end data warehouse and lakehouse architecture supporting company-wide analytics and ML initiatives using DBT, PostgreSQL, MongoDB, DynamoDB, Neo4j, and GraphQL.
- Built and optimized complex ETL/ELT pipelines with Airflow, Airbyte, Spark, and PySpark, achieving significant improvements in data freshness, reliability, and cost efficiency.
- Integrated AWS and GCP services (Lambda, API Gateway, S3, SQS/SNS, Cloud9) to create scalable, event-driven data ingestion and processing layers.
- Established data quality monitoring, automated testing, and observability practices that reduced pipeline incidents and improved trust in analytics outputs.
- Acted as internal data consultant, helping product, finance, and operations teams maximize value from available data assets through reusable models and self-service tooling.
- Contributed to DataOps culture by implementing CI/CD for data transformations, infrastructure-as-code patterns, and comprehensive pipeline documentation.

Head of IT and Finance - Engineering Solutions LLC

March 2013 - December 2017

- Directed IT strategy and financial operations, overseeing ERP systems, reporting platforms, and process automation initiatives.
- Designed and implemented financial data models, budgeting systems, and management reporting frameworks that supported executive decision-making.
- Established data governance, procurement controls, and cross-departmental data flows that improved operational visibility and compliance.

Head of IT Department - New Engineering Solution

April 2003 - February 2013

- Built and managed enterprise reporting infrastructure and data integration between operational systems and finance.
- Developed automated ETL processes and dashboards that provided real-time visibility into business performance.
- Led digital transformation projects that modernized legacy data handling and introduced structured analytics practices.

Education

- **RPANEP**A - MBA, Information Technology (*September 2005 - May 2007*)
- **Southern Federal University** (formerly Rostov State University) - PhD, Mathematical Sciences (*September 1994 - May 2003*)

Certifications

- International qualification: **Certified Accountant Practitioner (CAP)**
 - Advanced training: **Financial accounting and reporting (IFRS), Management accounting**
-

Additional Information

- Extensive experience bridging technical data engineering with business outcomes across fintech, SaaS, and manufacturing domains.
- Strong advocate for clean data architecture, observability, and developer-friendly data platforms.
- Comfortable operating in fully remote, distributed international teams; currently based in Bangkok, Thailand.
