

Vitaly Kurnosov

Data Engineer | AI-Enabled Data Platforms | ETL/ELT | Cloud & Analytics Engineering

Place of Residence: Shanghai, China

Phone / Skype: +86 15601694273

Email: rikkimortycrypt@gmail.com

WeChat: porohnya

Telegram: @vitaly_kur

Languages: English - fluent spoken and written; Chinese - HSK 4; Russian - native

Professional Summary

Data Engineer with a strong background in turning data science prototypes into production-ready data platforms and AI-driven solutions. Experienced in designing data warehouses, building ETL/ELT pipelines, integrating cloud services, and supporting analytics and machine learning workloads in business-critical environments.

Bring a practical mix of data engineering, software development, analytics, and architecture thinking. Comfortable working with structured, semi-structured, and real-time data, improving data quality, and enabling product teams with reliable pipelines, reusable datasets, and internal data expertise.

Hands-on across SQL, Python, JavaScript, Airflow, Spark, PySpark, DBT, Airbyte, PostgreSQL, MSSQL, MongoDB, DynamoDB, Redis, Neo4j, AWS, and GCP. Actively follow the AI landscape and apply generative AI and LLM-based tooling to speed up delivery, experimentation, and decision-making.

Core Skills

Area	Tools and experience
Data platforms	Data warehouse design, ETL/ELT, data modeling, data quality, analytics engineering
Programming	SQL, Python, JavaScript, API integrations, automation
Orchestration and processing	Airflow, Spark, PySpark, Airbyte, DBT, DAG-based pipelines
Databases	PostgreSQL, MSSQL, MongoDB, DynamoDB, Redis, Neo4j, GraphQL-based integrations
Cloud	AWS Lambda, API Gateway, S3, Cloud9, Secret Manager, SQS, SNS, GCP services
AI and analytics	ML pipeline support, AI model deployment, real-time integration, generative AI and LLM workflows
Delivery	CI/CD, DevOps, DataOps, internal consulting, cross-functional collaboration

Professional Experience

Data Engineer / AI Product Engineer - Sinoptics AI

March 2025 - Present

- Contribute to an AI-focused product environment represented through the private GitHub organization SinopticsAI, supporting data-driven product and engineering workflows.
- Build and refine Python- and SQL-based data flows that transform raw, semi-structured, and API-sourced inputs into reusable datasets for analytics and AI-assisted product features.
- Design schemas, validation rules, and integration patterns that make internal data assets easier to use across experimentation, product delivery, and operational reporting.
- Support LLM- and agent-oriented workflows with structured context preparation, data quality controls, and production-minded pipeline thinking.
- Work across product and engineering functions to move prototypes into maintainable implementations with clearer interfaces, delivery discipline, and measurable business value.

Data Engineer - Yofi (USA company)

February 2022 - January 2026

- Led the design and implementation of a data warehouse architecture and ETL/ELT workflows to ensure data quality using technologies such as DBT, PostgreSQL, GraphQL, MSSQL, MongoDB, DynamoDB, Redis, Neo4j, SQL, Python, and JavaScript.
- Integrated AWS and GCP cloud services to develop robust data solutions, including Lambda, API Gateway, S3, Cloud9, Secret Manager, SQS, and SNS for scalable and efficient data handling.
- Developed and optimized big data processes using Spark, Airbyte, Airflow, and PySpark within Airflow DAG pipelines, improving data reliability and operational efficiency.
- Implemented advanced data processing and analytics frameworks with a focus on real-time data integration and AI model deployment.
- Supported automation of API documentation and provided internal expert consulting to optimize data usage across departments.
- Contributed to CI/CD pipelines and DevOps/DataOps practices for data platforms.

Head of IT and Finance - Engineering Solutions LLC

March 2013 - December 2017

- Managed financial and IT operations, with focus on investment analysis, business models, budgeting, and operating controls.
- Established and coordinated regulatory frameworks for procurement, contracting, and financial controls, improving process discipline and operational efficiency.
- Supported cross-functional decision-making through reporting, systems thinking, and process automation initiatives.

Head of IT Department - New Engineering Solution

April 2003 - February 2013

- Oversaw ERP systems and reporting tools to support finance operations and strategic decision-making.
- Built and maintained reporting processes and internal systems that improved data visibility for management.
- Drove automation and structured reporting practices across business and IT operations.

Education

- RPANEPa (September 2005 - May 2007)

Master of Business Administration - MBA, Information Technology

- Southern Federal University (formerly Rostov State University) (September 1994 - May 2003)

Doctor of Philosophy - PhD, Mathematical Sciences

Certifications

- International qualification: Certified Accountant Practitioner (CAP)
 - Advanced training: Financial accounting and reporting (IFRS), Management accounting
-

Additional Information

- Strong background in bridging business needs, analytics requirements, and engineering delivery
- Experienced in cloud-first data architectures, production data pipelines, and AI-enabled product environments
- Comfortable in international and cross-cultural teams, currently based in Shanghai, China
